1.7 Transformations Practice

I. For each function below

- Determine the parent function, $p(x)$
- Describe the transformations from $p(x)$ performed to obtain $f(x)$.
- Use these transformations to graph the new function.

X	Y
-2	4
-1	0
0	0
1	4

X-3	-2(y)	y+5
-5	-8	-3
-4	-2	3
-3	0	5
-2	-2	3
-1	-8	-3

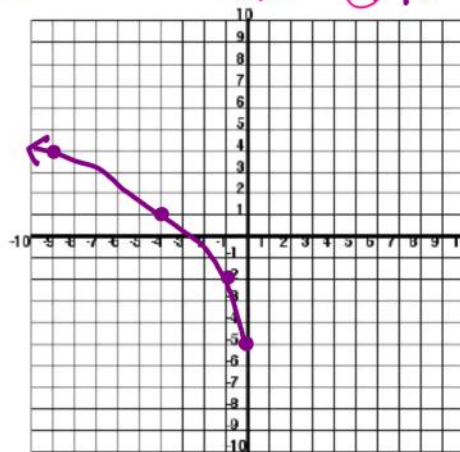

1. $f(x) = -2(x+3)^2 + 5$

- $p(x) = x^2$
- Shift 3 left, reflect over x-axis, vertical stretch, shift up

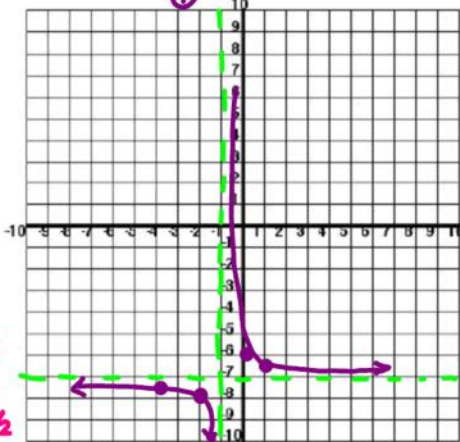

X	Y	X(-1)	3(y)	Y-5
0	0	0	0	-5
1	1	-1	3	-2
4	2	-4	6	1
9	3	-9	9	4

2. $f(x) = 3\sqrt{-x} - 5$

- $p(x) = \sqrt{x}$
- Reflect over y-axis, vertical stretch, shift 5 down.

3. $f(x) = \frac{1}{x+1} - 7$

X	Y
1	1
2	1/2
-1	-1
-2	-1/2

X-1	Y-7
0	-6
1	-6.5
-2	-8
-3	-7.5

- $p(x) = \frac{1}{x}$
- Shift left 1, 7 down

4. $f(x) = -\left(2 - \frac{1}{2}x\right)^3 + 4$

* See pg 3 for work

Remember to factor first!

X	Y
-2	-8
-1	-1
0	0
1	1
2	8

(-2)x	X+1	-1(y)	Y+4
4	8	12	
2	6	8	
0	4	5	
-2	2	4	
-4	0	-4	

- $p(x) = x^3$
- Reflect over y-axis, Horiz stretch, shift 2 Rt, Reflect over x-axis, Shift up 4

II. Write the equation of the following functions, given the graphs.

$P(x) = \sqrt{x}$ Shift 8 left, Reflect over X-AXIS, Shift 5 down
 $f(x) = -\sqrt{x+8} - 5$ * check on calc.

$P(x) = \sqrt{x}$ Reflect over y Axis, Horiz compress by 2, Shift 6 RT, Reflect over X-AXIS
 $f(x) = -\sqrt{-2(x-6)} = -\sqrt{-2x+12}$

III. Write the equation of the following functions (make sure to use function notation), given the parent function and the transformations performed.

7. $p(x) = \frac{1}{x}$, vertically stretched by a factor of 7, reflected in the y -axis, translated 5 units to the right, and translated 3 units down.

$f(x) = 7\left(-\frac{1}{x-5}\right) - 3$

$f(x) = \frac{-7}{x-5} - 3$

8. $p(x) = x^2$, horizontally compressed (shrunk) by a factor of $\frac{1}{3}$, reflected in both the x -axis and the y -axis, translated 12 units to the left and 4 units up.

$f(x) = -(-3(x+12))^2 + 4$

$f(x) = -(-3x-36)^2 + 4$

9. $p(x) = \sqrt{x}$, vertically stretched by a factor of 2, horizontally stretched by a factor of 5, and translated 20 units to the right.

$f(x) = 2\sqrt{\frac{1}{5}(x-20)}$

$f(x) = 2\sqrt{\frac{1}{5}x-4}$

IV. State the Domain and Range for both the original function and the transformed function for each part of question III. Use Interval Notation.

	Original Domain	Original Range	Transformed Domain	Transformed Range
7.	$(-\infty, 0) \cup (0, \infty)$	$(-\infty, 0) \cup (0, \infty)$	$(-\infty, 5) \cup (5, \infty)$	$(-\infty, -3) \cup (-3, \infty)$
8.	$(-\infty, \infty)$	$[0, \infty)$	$(-\infty, \infty)$	$(-\infty, 4]$
9.	$[0, \infty)$	$[0, \infty)$	$[20, \infty)$	$[0, \infty)$

$$4. f(x) = -\left(2 - \frac{1}{2}x\right)^3 + 4$$

$$= -\left(-\frac{1}{2}x + 2\right)^3 + 4$$

$$= -\left(-\frac{1}{2}(x-4)\right)^3 + 4$$
